### **MILLSTREAM INTERSECTS STACKED MASSIVE SULPHIDE ZONES BELOW THE POTTER MINE DEPOSIT**

Toronto, Ontario -- Millstream Mines Ltd. (MLM - TSX-V) is pleased to report that in the initial drilling activity of its 2006-07 winter program, drill hole S06-01 has intersected 2 distinct and separate massive sulphide zones thereby further supporting the suspected "stacked" nature of the massive sulphide mineralization. The core intervals will be sample prepared for submission to the assay lab at Swastika, Ontario.

The Potter Mine Property is host to a copper-zinc-cobalt VMS deposit located in the highly prolific Abitibi Greenstone Belt at the confluence of the Destor-Porcupine and Pipestone Faults near the town of Matheson in Northern Ontario, Canada.

Management has reviewed this report and press release with the company's consultant Edward Bettiol, P. Eng, who is the designated qualified person for the property.

The principle objective of Millstream Mines Ltd. is to enhance and develop known mineral properties to production potential.
