MILLSTREAM'S KOVAL GOLD PROPERTY PROGRAM UPDATE

Toronto, Ontario, Millstream Mines Ltd. (MLM-TSX-V) wishes to announce that consultant Phil A. Brown, P. Geo., QP per NI 43-101, will be leading a field crew to the Company's Koval Gold Property for a scheduled arrival on site by May 18, 2006.

With the snow mainly gone, the party will explore the property to: (1) determine the geological control of the Vein #1 gold ore shoots where trenched by Richelieu Gold Mine in the 1930s; (2) sample the Vein #2 and two additional known veins; and (3) run soil Geochem and Magnetics surveys on control lines to determine (a) the lateral extent of the known quartz veins and where they carry gold ore grades and (b) where additional gold bearing quartz veins occur and their orientations.

The Geochem work will outline the higher gold bearing sections which will be stripped and sampled where possible. Diamond drill hole locations will be plotted and marked for vertical section drilling to follow ore shoots to depth and along strike this summer.

The principle objective of Millstream Mines Ltd. is to enhance and develop known mineral properties to production potential.
